Dear Mr Wyatt,

Thank you for the opportunity to meet with the Lake Clifton Herron Progress Association in August 2008 to discuss the current application of biosolids to the McLarty Pine Plantation. It was noted at the meeting that members of the progress association and local community have concerns about the biosolids application, specifically:

- the timing and length of the biosolids application;
- the potential for (the nutrients within) biosolids to enter the local groundwater (or nearby sensitive surface water) systems;
- the regulations and approvals required to conduct the application;
- public access to the application site;
- odours and odour buffers;
- signage (regarding biosolids use & restricted access), and;
- consultation with local community groups prior to the application.

As agreed at the meeting the Water Corporation has compiled a comprehensive package addressing the list of concerns above, which is attached as a series of fact-sheets for your perusal. If you have any questions regarding the fact sheets, or if you would like to invite us to present this information to your association please contact our Biosolids Operations Coordinator, Kendal Becu on the number listed above.

As mentioned at the meeting, applications of biosolids in the area have taken place in previous years, with no concerns raised regarding these applications. However both organisations are now aware of the local community interest in this activity and the Water Corporation commits to engaging with the local community prior to future applications.

Yours sincerely
